Overall Report · Example questions (p1) on data Examplev1

Board Insight-Example · Job j01_prototype-p1-example-questions_data-Examplev1 · the first extract: ten days, 600 rows

X01 · What did the example find, in one line?

Arm B's outcome rate is about 19 points higher than arm A's (50% against 31%), on 600 made-up rows.

How sure: firm on the whole population; open by group

X02 · What can this data not say?

It cannot say whether the groups differ (the difference spans -21 to +12 points); group_3 was refused for power; and it covers only 10 days.

How sure: these limits are exact: counts, a refused cut and an interval

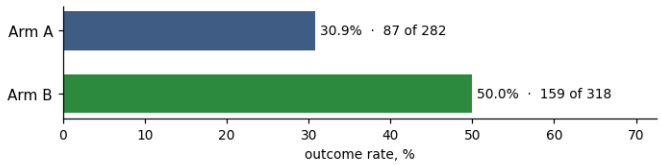

---

Each answer rests on the Data, Information, Knowledge and Wisdom questions below it, cited on its page: Insight-Example/j01_prototype-p1-example-questions_data-Examplev1/tNN_X<NN>_<slug>/. Generated by haipipe-insight ref/overall_report.py; do not edit.

The figures

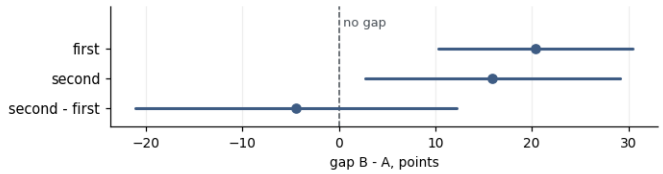

One picture per answer, each drawn from the result table of the question it cites.

X01 · Arm B's outcome rate is the higher one

from (I01 · t03)

X02 · The groups' gaps cannot yet be told apart

from (K01 · t05)
