

① OUTLINE · the plan

one POINT per bullet, a content unit

C3.P1.B4 · Establish robustness across specifications

read the point, write the scaffold:

one POINT → one or more SENTENCES
never inventing a number, citation,
reading or figure

read any sentence, recover its point:

realizes: rides in a comment on the line,
so REVISE may split or merge sentences
without losing the join

④ DRAFT · the page

one point became THREE sentences, holes where the answers will sit

C3.P1.S1 · The primary estimate is <VALUE HOLE>.

<!-- realizes: C3.P1.B4 -->

C3.P1.S2 · It remains <ROBUSTNESS HOLE> across specifications.

<!-- realizes: C3.P1.B4 -->

C3.P1.S3 · <DISPLAY HOLE> compares the estimates.

<!-- realizes: C3.P1.B4 -->

the address is the join key

C3.P1.B4 ↔ C3.P1.S1 S2 S3

the prefix is shared; only the last token differs, because the units differ

B = a POINT in the plan file · owner: haipipe-plugin-outline

S = a SENTENCE on the rendered page · owner: haipipe-sentence
