

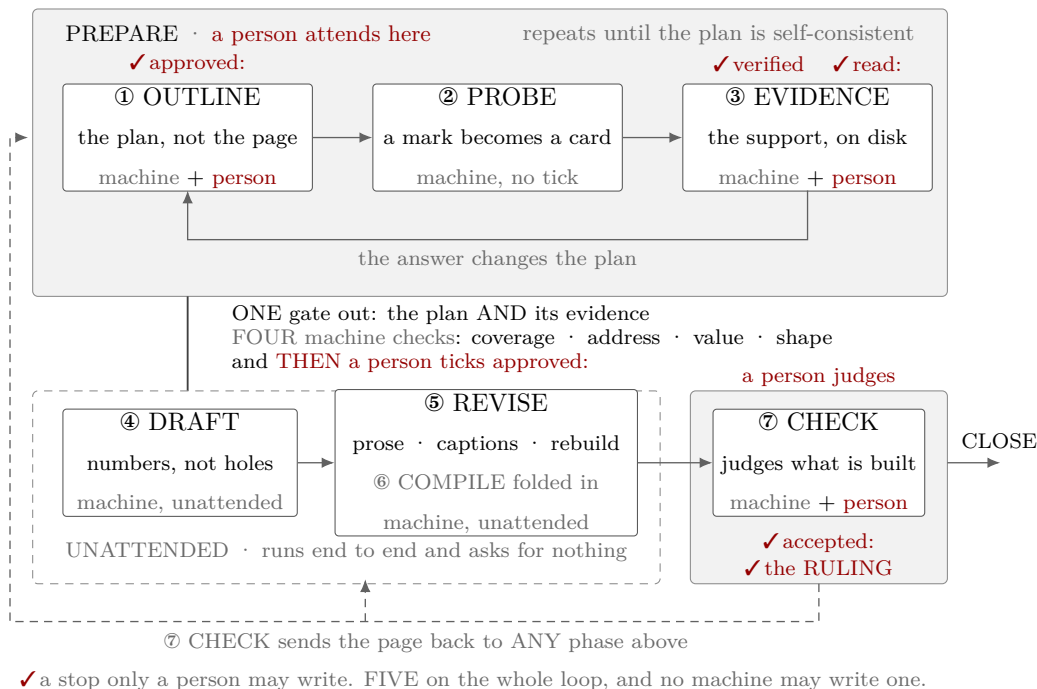

Figure 1: The loop at a glance, in the shape ruled 260819. A PREPARE loop (① OUTLINE, ② PROBE, ③ EVIDENCE) repeats until the plan is self-consistent, because evidence does not confirm a plan; it changes it. ONE gate leads out: four machine checks (coverage, address, value, shape), then a person's **approved**:. Everything after the gate runs unattended (④ DRAFT, ⑤ REVISE with ⑥ COMPILE folded in) until ⑦ CHECK, which a person judges and which reaches CLOSE or returns the page to any earlier phase. Red ticks are the five stops reserved for a person; no machine may write one.
