

$\Phi = \{\text{DRAFT}, \text{PROBE}, \text{REVISE}, \text{CHECK}\}$ the four phases

$T = \{\text{CLOSE}, \text{HOLD}\}$ the two terminals

$R(\varphi) = \Phi \cup \{\text{HOLD}\}$ for $\varphi \in \Phi \setminus \{\text{CHECK}\}$

$R(\text{CHECK}) = (\Phi \setminus \{\text{CHECK}\}) \cup T$ the judge's own row

Two consequences follow from the second pair of lines alone:

$\text{CLOSE} \in R(\varphi) \iff \varphi = \text{CHECK}$ only a judge may close

$\text{CHECK} \notin R(\text{CHECK})$ no version is judged twice untouched
