

$\Phi = \{\text{DRAFT}, \text{PROBE}, \text{REVISE}, \text{CHECK}\}$	the four phases
$T = \{\text{CLOSE}, \text{HOLD}\}$	the two terminals
$R(\varphi) = \Phi \cup \{\text{HOLD}\}$	for $\varphi \in \Phi \setminus \{\text{CHECK}\}$
$R(\text{CHECK}) = (\Phi \setminus \{\text{CHECK}\}) \cup T$	the judge's own row

Two consequences follow from the second pair of lines alone:

$\text{CLOSE} \in R(\varphi) \iff \varphi = \text{CHECK}$	only a judge may close
$\text{CHECK} \notin R(\text{CHECK})$	no version is judged twice untouched

Figure 1: The legal-route relation R , and the two laws it makes checkable. A producer may hand off to any phase including itself; the judge alone reaches CLOSE, and alone cannot reach itself, so every judged version passes through a producer before it is judged again.
